

Mean residual by clear-sky irradiance decile, 2022 vs 2023 — shape, not vertical offset, distinguishes proportional from absolute

2021-22 residuals are IN-SAMPLE (training) predictions; 2023 residuals are OUT-OF-SAMPLE. Part of any difference between them is prediction-error type, not physical change. A uniform vertical gap is expected; the informative feature is whether it widens with irradiance.
